

## Literature Databases and Using EndNote

Biochemistry Boot Camp 2019  
Session #11  
Becca Hill  
rh1614@msstate.edu

### Scientific Literature

- Comprises scholarly publications that report original empirical and theoretical work in the natural and social sciences, and within an academic field.
- Often abbreviated as the literature.

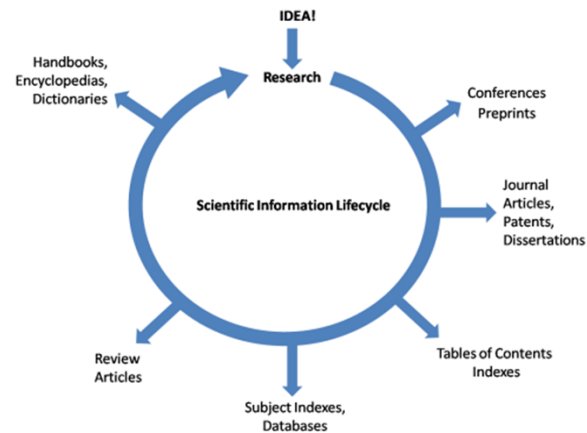

### Scientific Literature

- Babylonians recorded astronomical events like lunar eclipses on clay tablets
- Galileo Galilei's letters on astronomy
- Isaac Newton's landmark *Philosophiæ Naturalis Principia Mathematica*

### Types of Literature

- Primary research articles
- Review articles
- Editorials/Opinion/Commentary/Perspectives
- Trade publication articles
- News/Blog posts
- Technical Reports
- Field Trip guides
- Conference proceedings
- Books
- Dissertations/Thesis

## Cycle of Scientific Literature

## Resources

- PubMed
- Scopus
- SciFinder
- Google Scholar

## PubMed

- This is the nation's main portal for searching publications in all biomedical and related fields.
- It is free, funded by the US Government through NCBI.
- Many records are cataloged back to 1966, but some go as far back as the 1800s. All new medical research is added to PubMed shortly after publication.
- PubMed has a unique system for refining searches; for example:
 

Smith\_J [auth] AND Jones\_D [auth] AND 1997 [dp]
- This query will search for articles published by J. Smith and D. Jones in the year 1997.
- <https://www.ncbi.nlm.nih.gov/pubmed/>

## Scopus

- Scopus is a subscription-based citation indexing service.
- MSU is a subscriber, but you must be on campus (or connected via VPN) to use Scopus.
- It is focused on a broader range of topics than PubMed, which just focuses on biomedical journals.
- Scopus indexes not only the publications themselves, but also the all of the cited articles in a given publication.
- This makes it possible to view a list of papers that have cited a paper of interest.
- <https://www.scopus.com/home.uri>

## SciFinder

- SciFinder is a literature database maintained by the Chemical Abstracts Service (CAS) of the American Chemical Society.
- While it includes biochemistry topics, it also includes all other divisions of chemistry.
- Its strength is the ability to search chemical compounds and reactions and link them with publications.
- MSU has access, but you must first create an account at <http://guides.library.msstate.edu/scifinder>
- <https://sso.cas.org/as/9l9qv/resume/as/authorization.ping>

## Google Scholar

- Google Scholar is a free service for searching citations and text of a broad arrange of articles.
- It can be very useful, especially for finding old literature not covered in other databases; however, the results can be inconsistent or incomplete.
- The results it gives will not be inaccurate, and it may find full-text articles that you may not be able to locate otherwise.
- Currently, though, it is recommended to use the other search engines listed above while Google Scholar matures.
- <https://scholar.google.com/>

## Tips for Searching the Literature

- Start with a review
- Science is a web
- Citations count
- Look at the reference list
- Don't be an age discriminator
- Ask for help
- Subscribe!

## Start with a Review

- Review articles contain a summary of the research in a given field.
- They usually do not contain new experiments, but they can help you understand how the field is currently thinking about a topic.
- Review articles generally cite more research-centric papers, and these are often important papers in the field, so be sure to look at the list of references, too.
- In PubMed, you can often find review articles simply by adding "review" in the search field.

## Science is a Web

- An easy way to review the newest research is to find an informative article and see what papers have cited that article.
- Scopus and Web of Science let you search “up” to find newer research, so it’s possible to find work published today by starting from a 10- year old paper.

## Citations Count

- Generally, important papers will be cited more frequently.
- Sorting by the number of times a paper is cited will allow you to find high-impact publications.
- But watch out: often times these papers are review articles, which may not contain original research.

## Look at the Reference List

- Even if the results of a paper aren’t relevant to your work, the introduction may contain an invaluable discussion of important points.
- And the list of references may give you a starting point for creating your own literature review.

## Don’t be an Age Discriminator

- Often the most important work in the field was performed many years ago.
- Don’t shy away from work published in the 1950’s, 1960’s, or even earlier, particularly if it is highly cited.
- At the same time, remember that online databases may not cover the earliest dates, and you may need to venture to the library (or use Google/Wikipedia) to see if you’re missing a critical history.

## Ask for Help

- Your research adviser, the reference librarian, and other researchers in the field have been where you are now.
- Ask them how they find good papers, and see if they have advice on what you should read.

## Subscribe!

- Many journals offer a free table of contents service that you can subscribe to via email.
- This lets you see the most current articles as they are published.
- While you don't want to be overwhelmed, if there is a particularly relevant journal, it may be worth subscribing to their eTOC service.

## RSS Feed

- **Really Simple Syndication**
- An easy way to keep up with websites without having to constantly visit them.
- When a website is updated, that site's newsfeed can notify you and give you a link to the new content.

## Feedly

- Compiles news feeds from a variety of online sources for the user to customize

– <https://feedly.com/>

## Using Feedly

- Create an account
- You can add categories
- Adding a website of your interest

## EndNote

- EndNote is a software program that works with Microsoft Word to automatically format in-text citations and end-of-paper reference lists with your chosen style (APA, MLA, Chicago, etc.).
- EndNote can also be used as a personal database to gather and store citation records from different information sources.

## EndNote

- Automatically insert well formatted citations into your paper
- Automatically reformat citation style in one click
- Tag citations with your own keywords
- Search live within your EndNote library
- Sort your library by author, title, or date.

## Creating an EndNote Library

- Open EndNote
- Go to File -> New
- Name your library

## Manual Data Entry

- At the top of the screen, go to References -> New Reference
- Select the correct Reference Type
- Enter the citation data
- EndNote will automatically save on closing

## Search Through Endnote

- Go to Tools -> Online Search -> Choose a Connection
- Choose the name of the appropriate database (PubMed, Business Source Premier, etc.)
- Enter your search and click "OK" to retrieve citations

## Export Citations to an EndNote Library

- Open your EndNote library
- Search your selected database
- Within the database citation or list of marked citations, follow the "How to Cite" link
- Select Export to Third Party Software -> EndNote and click the "Export" button
- The citation should automatically appear in the EndNote Library

## Use EndNote with Microsoft Word

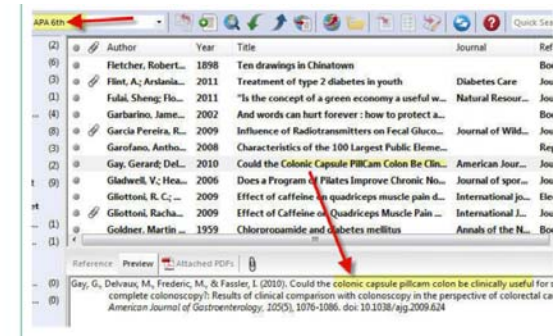

- Open the EndNote library that contains the citation you need in your paper, put your cursor in the text where you'd like to insert the citation
- From Word 2007, all EndNote tools are gathered in the "EndNote X7" tab at the top
  - Not present in Word, File -> Options -> Add-ins -> Scroll down under Inactive Application Add-ins -> Select EndNote Cite While You Write -> Select Go -> Check Box for EndNote -> Ok
- Insert citations -> Insert Citation...
- Insert citations -> Insert Selected Citation(s)

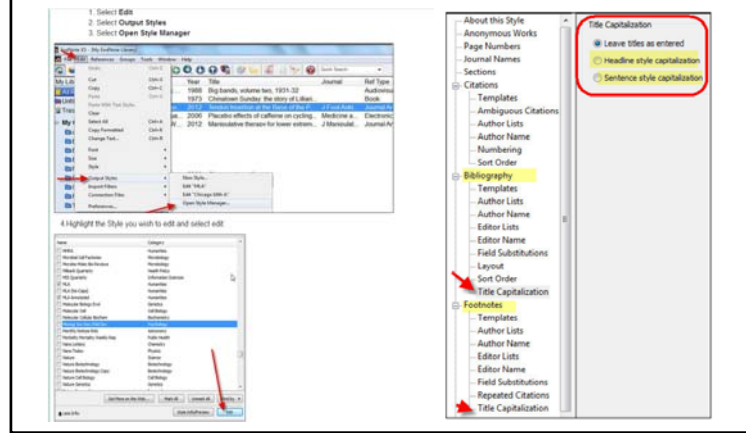

## Placement of the References and Multiple References

- Depending on the style you have to place the reference before or after the period
  - Ex. end.<sup>1</sup> or end<sup>1</sup>.
- Multiple references
  - Ex. Experimental evidence, such as FTIR and NMR spectroscopy, circular dichroism (CD), and Raman spectroscopy,<sup>18,49-51</sup>

## Fixing Capitalization of Titles using Capitalization Preferences

## Fixing Capitalization of Titles using Capitalization Preferences

## Fixing Journal Abbreviation using Term Lists

### Import and Edit the Journal Term List

- In EndNote, go to "Tools > Open Term Lists > Journal Terms List".
- Highlight the first journal, and press [Ctrl]+A on the keyboard to highlight all the terms (on a Macintosh, this would be [Command]+A). **Note:** If the Journal Terms List is empty, skip to step 4.
- Next, press the "Delete Term" button to the right to empty the list of old terms.
- Go to the "Lists" tab at the top, and click on the "Import List" button.
- Browse to the Term Lists folder within the EndNote folder, and choose to open the Medical text file (assuming you want to use the Index Medicus abbreviations).

## Fixing Journal Abbreviation using Term Lists

### Modify The Output Style So The Abbreviated Journal Name Is Used

- Next, to make sure the style is using the correct substitution, go to "Edit > Output Styles > Open Style Manager".
- In the list of styles, highlight the style you are using and click the "Edit" button.
- Click on "Journal Names" on the left.
- Make sure the style is using the Full Name or one of the Abbreviations as needed.

[https://www.youtube.com/watch?time\\_continue=274&v=Ewy8\\_DwdZGo](https://www.youtube.com/watch?time_continue=274&v=Ewy8_DwdZGo)

## Edit Styles

- Open EndNote
- Go to **Edit > Output Styles > Open Style Manager**
- Select the style you want to edit. You may need to add a style to EndNote (see the [Downloading output styles into EndNote](#) box to the left).
- Click **Edit**. The style window opens.

To change how in-text citations appear:

1. **Left menu > Citations > choose the aspect you want to change**

**Example:** When using EndNote's APA 6th output style the author's initials will appear in in-text citations for those authors with the same surname but different initials. To prevent this from happening:

## Edit Styles

- Open the style window as outlined above.
- **Left menu > Citations > Author Name > untick** Use initials only for primary authors with the same name

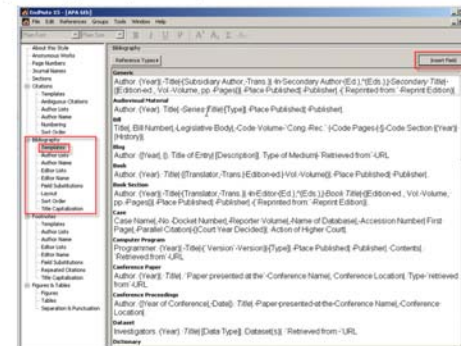

- Then go **Citations > Ambiguous Citations > untick** Include the author initials or full name in citation.
- **Close** the style window (second X) > **Yes** to save changes. This will save as **APA 6th copy** leaving the original style unchanged.
- Go to **Format Bibliography** icon and select **APA 6th copy**.
- This should remove author initials from your in-text citations.
- If you experience problems when trying to save your edited style see the [EndNote FAQ: Problems saving styles](#)

## Edit Styles

To change how citations appear in your bibliography:

1. Open the style window as outlined above. **Left menu > Bibliography > Templates**. View the Bibliography template in the main window.

- **To alter the format** - Highlight the text & use Formatting buttons above the In-Text Citations window
- **To alter punctuation** - type or delete punctuation as required.
